HOW THIS WORKS

We build it together, one step at a time.

Watch the projector, then do the same step on your phone. Nobody moves on until the group is ready.

By the end, you will have a captioned, music-backed, vertical video ready to publish.

Ten steps to a finished cut

1

Import Bring in all your clips and your voiceover.

2

Timeline Lay clips in storyboard order.

3

Trim & split Cut each clip to its best 2-3 seconds.

4

Reorder Hook clip first. Rearrange until it flows.

5

Transitions One or two simple cuts. Do not overdo it.

6

Music Add a track, then duck it under your voice.

7

Voiceover Drop in your recorded narration.

8

Auto-captions Generate captions. Fix any wrong words.

9

Text hook Add a bold line of text on the first frame.

10

Export 1080p. Save to your phone.

FOR YOUR TRAINEES

There's an even simpler path.

When you teach others, show them editing directly inside TikTok or Instagram.

Fewer steps, no extra app.

CapCut gives more control; in-app editing gets beginners posting faster.

CUT IT DOWN

Done beats perfect.

A finished 30-second video today is worth more than a perfect one next month.
Export it.
